

# SecurityPlus

In JDE E1, using the standard Security Workbench or Action and View security for UDOs can be a time-consuming task.

SecurityPlus allows you to modify 100s of rows of security at once, and even design offline before copy/pasting into the SecurityPlus grid. It works for all E1 security types!

## Have you ever asked yourself... The benefits

- |   |  |
|---|--|
| <ul style="list-style-type: none"> <li>• Can I change multiple security records at the click of a button?</li> <li>• Is there a way to add 100s of records at the same time?</li> <li>• How do I know if I have unnecessary security records in my tables?</li> <li>• Can I maximize resources to focus on more value-adding activities?</li> <li>• How do I make open to close possible without disrupting my users?</li> <li>• Is it possible to simplify UDO security management?</li> </ul> | <ul style="list-style-type: none"> <li>✓ Save time and money</li> <li>✓ Maximize ERP investment – keep security inside JDE</li> <li>✓ Simple security clean-up</li> <li>✓ Easily design security offline and copy/paste straight into JDE</li> <li>✓ Mass copying and deletion to increase efficiency</li> <li>✓ Create warning messages and safeguards with intelligent defaulting</li> <li>✓ Quickly manage security and UDO access in the same place</li> </ul> |
